New Zepp Model : ST-36-180

The new Aquazepp ST-36-180 is a further development of the legendary LT model range, one which continues our tradition of innovation with the introduction of fourspeed motor regulation.

This revolutionary new feature allows the diver to select a fixed rate of progression and a definite unit run time, avoiding the uncertainties arising from the use of variable speed controls.

The Aquazepp speed control is unique and absolutely free from energy losses, unlike variable electronic controls which inevitably convert some of the valuable battery energy into heat.

AQUAZEPP DPV's : The Professional Divers choice.

Aquazepp Divers' Propulsion Vehicles are the worlds most versatile and efficient form of underwater transportation currently available to the professional diver. The Aquazepp enables the accomplished diver to cover long distances and overcome strong currents without exertion. Effortless underwater propulsion substantially reduces breathing gas consumption and permits more bottom time.

The purchase of an Aquazepp provides the user with the benefit of over thirty years of experience in the manufacturing of quality DPV's. Aquazepp has continually been at the forefront of innovation and development in underwater transportation and our record of technical excellence, reliability and diver safety is second to none.

The list of achievements that have been made using Aquazepp vehicles includes world-record duration dives and major undersea explorations, whilst the range of use our vehicles have found includes everything from commercial diving to Hollywood film production. No other vehicle can demonstrate the flexibility an Aquazepp provides to the user.

AQUAZEPP : Commitment to quality.

Aquazepps' approach has always been to provide that which our customers require, namely reliability, safety, innovation and simplicity. That we receive continual reports of machines still in use decades after leaving the factory says more about Aquazepps' reputation as "the world's most reliable DPV" than we possibly could.

Most of the orders for our vehicles continue to come from existing customers' recommendations. This is a fact of which we are proud and one which justifies our ongoing commitment to a quality manufacturing process. Our Customers are Military, Rescue and Professional Divers.

If you are looking to purchase a Professional DPV, follow our advice.

Ask an Aquazepp user first.

AQUAZEPP ST-36-180

Speed - Autonomy Configuration

WEIGHT	SPEED	DURATION
10 kg = 22 lbs	▶ 135 ft/min=2,5 km/h	▶ 2-2½ hrs.
14 kg = 30 lbs	▶ 160 ft/min=3,0 km/h	▶ 2 hours
17 kg = 38 lbs	▶ 200 ft/min=3,5 km/h	▶ 1- 1¼ hrs.
25 kg = 55 lbs	▶ 270 ft/min=5,0 km/h	▶ ¾ hours

Diving Depth: 180 meters
Weight (Vehicle): 18 kg = 40 lbs
Length: 1.05 M = 3 ft 5"

Sealed Lead Acid Batteries: 12v 24A plus 2 x 6v 12A
Battery Weight: ca. 9 kg = 20lbs

Motor switch at left handle stops motor when released.

Motor switch for continuous operation at right hand handle.

Accessories: Electronic Battery Charger (Included)
